SUMMARY

Senior Associate 2 at EY-GDS, where I own the design of a finance chatbot used by EY teams worldwide, built on RAG, LangGraph and Elasticsearch. Four years of shipping ML and LLM systems to production, from OCR pipelines to text-to-SQL agents. On the side, I built and run Agaah, a live news app powered by open-source LLMs.

EXPERIENCE

EY-GDS (Ernst & Young Global Delivery Services)

Gurugram, India

Senior Associate 2

Sep 2026 – Present

- Took over the design of the finance chatbot: how documents are retrieved, how the LangGraph flows fit together, and which model handles which task.
- Work directly with finance users to turn their requests into features, instead of building from specs handed down.
- Responsible for keeping the chatbot reliable in production: fixing issues, testing answer quality, and keeping cost and response time in check.
- Review code for the associates on the team and help them when they get stuck.

Senior Associate

Oct 2024 – Sep 2026

- Built a finance chatbot that EY's finance teams use worldwide. It answers their questions with RAG over Elasticsearch, Azure AI Search and FAISS, and uses LangGraph for questions that take several steps. Queries now get resolved 30% faster.
- Used LLMs to draft internal reports automatically, cutting preparation time in half.

Associate 3

Oct 2023 – Oct 2024

- Built chatbots that answer questions about client databases by writing the SQL themselves (LangChain SQL Agent, PandasAI). Analysts spent 40% less time on manual queries.
- Connected OpenAI models to client workflows so routine tasks ran without anyone stepping in.

Associate 2

Jul 2022 – Oct 2023

- Built ML-based Q&A modules that raised answer accuracy by 25%, so fewer answers needed manual checks.
- Wrote document generation scripts that saved 40% of processing time.

INTERNSHIPS

Machine Learning Intern, EY-GDS

Apr 2021 – Jun 2022

- Built a tool that reads org charts with Faster R-CNN and Azure OCR, automating 90% of the manual work.

Summer Intern, IDFC First Bank

Jun 2020 – Aug 2020

- Built an OCR and ML pipeline for KYC checks that cut verification time by 70%.

PROJECTS

Agaah, a news app (agaah.in) | Next.js, React Native, PostgreSQL, Groq, Ollama

2026

- Live on web and Android. Pulls stories from 37 Indian and world feeds and shows each as a 50–70-word summary.
- Summaries come from gpt-oss-20b on Groq. If Groq fails or runs out of quota, the app falls back to Llama 3.2 on Ollama, then to a simple extractive summary. Summaries that are too short or badly formatted are thrown out.
- When several outlets cover the same story, the app shows it once, matching titles by hash and by word overlap.

TECHNICAL SKILLS

LLMs: RAG, agent workflows, LangChain, LangGraph, LangChain SQL Agent, PandasAI, OpenAI API, Groq, Ollama, prompt design

Search and vector DBs: Elasticsearch, Azure AI Search, FAISS

ML and vision: Faster R-CNN, Azure OCR, entity extraction, OpenCV

Languages and backend: Python, SQL, TypeScript, FastAPI, Next.js, PostgreSQL, Docker, Git, Azure DevOps

EDUCATION

Thapar University

Patiala, India

Dual degree: BE in Computer Science + MBA

2017 – 2022
